# LARSON—MATH 353–CLASSROOM WORKSHEET 26 $x = n^2 + 1$ Primes Property Conjectures Investigation.

### Set up.

- 1. Start the Chrome browser.
- 2. Go to https://cocalc.com
- 3. Log in to your account.
- 4. You should see an existing Project for our class. Click on that.
- 5. Make sure you are in your Home directory (if you put files in the Handouts directory they could be overwritten.)
- 6. Click "New", then "Jupyter Notebook", then call it 353-c26.
- 7. Make sure you have SAGE as the kernel.
- 8. Look in your Home directory. You should see a conjecturing.py file and an expressions file AND today's Jupyter notebook.
- 9. Copy the latest version of number\_theory.sage from the Handouts directory to your Home directory.
- 10. load("number\_theory.sage").

#### **Review**

- 1. The **research question** is: are the infinitely many primes of the form  $x = n^2 + 1$ ?
- 2. What is a *property* in mathematics?
- 3. What is a *necessary condition* in mathematics?
- 4. What is a *sufficient condition* in mathematics?

## **Conjecture Proof Idea**

```
count_prime_divisors(x) <= digits10(x)</pre>
```

We interpreted this as: for any  $x = n^2 + 1$  prime, the number of distinct prime factors of x is no more than the number of base-10 digits. Here's a new idea to try: consider numbers  $x < 10^1$ ,  $x < 10^2, \ldots, x < 10^k$ . Maybe we can use this idea to make an inductive hypothesis?

**Idea**: Can we develop a theory for which  $x = n^2 + 1$  integers are prime (that is, have the *property* of being prime?) Maybe generating necessary (and sufficient) condition conjectures for being prime will advance this idea?

1. The currently coded (and loaded) properties are:

```
properties = [is_prime, is_even, is_odd, is_abundant, is_deficient, is_perfect, is_abundant_base, is_deficient_base, is_perfect_base, is_semiprime, is_semiprime_base, count_divisors_base_less_largest_prime_base, radical_base_less_euler_phi_base, count_divisors_base_less_smallest_prime_base, smallest_prime_less_euler_phi_base, smallest_prime_less_count_prime_divisors, smallest_prime_less_count_prime_divisors_base, euler_phi_base_less_sigma_base, count_divisors_base_less_euler_phi_base, largest_prime_base_less_euler_phi_base, radical_base_less_divisors_base radical_base_less_sigma_base]
```

2. Try this sufficient condition run. Are the conjectures true? Can you find any counterexamples?

```
1 \text{ objects} = [5, 17, 65, 901, 325, 170, 2210, 101, 4625, 197, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 1025, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357, 4357,

13 for conj in conjs:
             print (conj)
15
```

3. One idea to get new conjectures: eliminate all the even numbers greater than 2 from the objects list (they can't be prime). We only really need to investigate the odd  $x = n^2 + 1$  integers. Which of these are prime?

4. What other integer properties can we find (from the internet, papers, books, ChatGPT, etc (that we might add to get better conjectures)?

## Getting your classwork recorded

When you are done, before you leave class...

- 1. Click the "Print" menu choice (under "File") and make a pdf of this worksheet (html is OK too).
- 2. Send me an email (clarson@vcu.edu) with an informative header like "Math 353 c26 worksheet attached" (so that it will be properly recorded).
- 3. Remember to attach today's classroom worksheet!
